

PFAS TESTING

EPA has set limits for “forever chemicals” in drinking water.

We are committed to provide assistance to the ongoing operations of public water systems, water treatment facilities, manufacturing companies and other facilities with the testing of PFAS contaminants.

Exposure to PFAS has been linked to an increased risk of certain types of cancer, low birth weights, high cholesterol, and negative effects on the liver, thyroid and can compromise a person's immune and cardiovascular systems

The Environmental Protection Agency has finalized the nation's first drinking water standard for "forever chemicals (PFAS)" at a Limit of Quantitation of 4 ppt, a group of persistent human-made chemicals that can pose a health risk to people at even the smallest detectable levels of exposure.

ADPEN Laboratories is the standard for quality and excellence and our knowledge and experience enable us to provide testing assistance to the ongoing operations of public water systems and water treatment facilities (municipal and industrial water treatment plants), pharmaceutical manufacturing companies, manufacturing industries, environmental agencies, government bodies, airports, public health departments, defense and aerospace, agriculture, food production, real estate. Energy, oil, gas and construction firms.

The new rules would limit pollution from these per-and polyfluoroalkyl substances, or PFAS, which persist in the environment for centuries. Exposure to PFAS has been linked to an increased risk of certain types of cancer, low birth weights, high cholesterol, and negative effects on the liver, thyroid and can compromise a person's immune and cardiovascular systems.

For over 30 years, we have established a strong reputation for our commitment to protecting the environment and public health. Our mission is to provide the highest quality and excellence in all our analytical services, and this is at the heart of what we do every day.

We understand the importance of trust when it comes to the analytical testing of your agrochemical products. That's why we make it our top priority to ensure that our facility, processes, and services are in full compliance with EPA, FDA and OECD regulations. Our team of experts works hard to maintain the highest standards of quality, accuracy, and reliability in all of our tests.

ANALYTICAL SERVICES

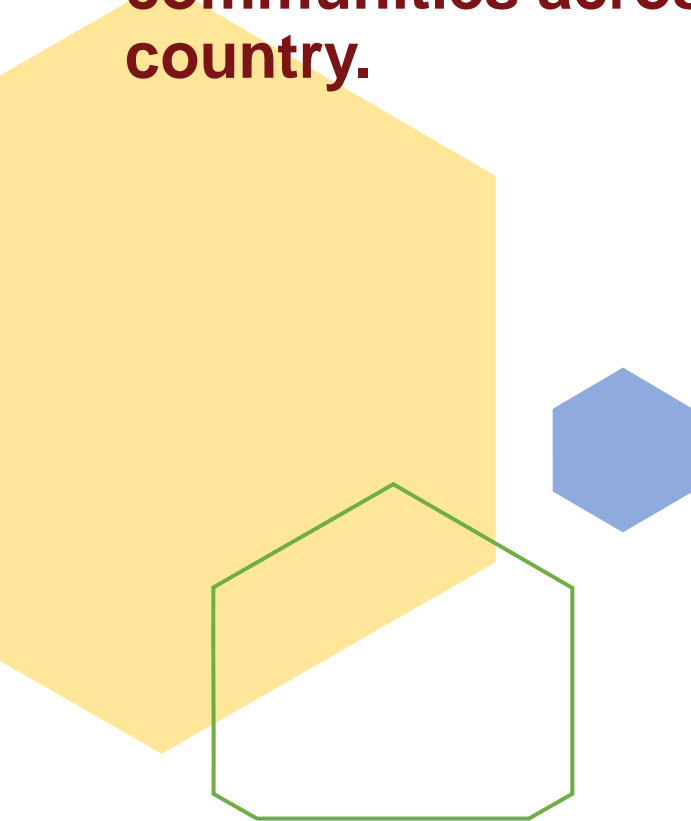

ADPEN uses EPA 533, EPA 537.1 and EPA 1633 procedures to test for PFAS in drinking water, wastewater, sediment, soil, tissue and other matrices. Limit of Quantitation in drinking water and wastewater is 4 ppt. ADPEN provides quality control testing, method development, validation and research analytical services in the following areas:

- Drinking water
- Waste water
- Soil and sediment
- Tissue
- Clinical research support
- Product safety
- Process and cleaning validation
- Textiles
- [Firefighting foams](#)
- Legal consultation
- Agricultural product testing
- Irrigation water

ADPEN is registered with the EPA and FDA (Registration No.: 1064435), ISO/IEC 17025:2017 certified laboratory and has a DEA permit (RA0270114) to handle controlled drugs of abuse.

U.S. EPA is taking another step in its efforts to protect people from the health risks posed by exposure to “forever chemicals” in communities across the country.

WASHINGTON – Today, April 19, 2024, the U.S. Environmental Protection Agency (EPA) is taking another step in its efforts to protect people from the health risks posed by exposure to “forever chemicals” in communities across the country. Exposure to per- and polyfluoroalkyl substances (PFAS) has been linked to cancers, impacts to the liver and heart, and immune and developmental damage to infants and children. This final rule will designate two widely used PFAS chemicals, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), also known as Superfund, and will help ensure that polluters pay to clean up their contamination.

This final action will address PFOA and PFOS contamination by enabling investigation and cleanup of these harmful chemicals and ensuring that leaks, spills, and other releases are reported...
